When this bull came through the alleyway to get his head clipped for pictures, Kevin said "here comes a wide load", hence his name! We used this bull as cleanup on registered cows. A stellar cow family that we would like a whole herd of, impressive epd's, no physical flaws, and a sire that has done a great job for us in the feedlot performance side. Note the great ME value of 3, the females will be fantastic out of this line. He is truly a herd sire prospect.

<p>This is an ET bull out of our favorite cow who went to town at 14! I did not get her blood typed, and you can't register an ET calf without 2 blood-typed parents. (darn the rules) The performance data are his actual numbers, and his epd's are just parental estimates. His actual ultrasound put him at the highest marbling of the whole group. So he has no registration number, but he has everything else! His full brother is the Tomhawk bull who has sons in this sale. Easy keeping, great growth, long lived females that really produce.</p>

Another herd bull prospect. Absolutely phenotypically flawless. He is a powerhouse; long and a wide load. He is one that makes everyone go 'who is that bull?' He may not be a heifer bull, but his epd's show he does not carry that much bw, great for cows. This bulls mother is a very moderate, super uddered girl. Look at that ME value. You want females from him.

This bull can "cure what ails ya!" Great carcass, moderate frame, good scrotal, great cow family and great potential. He ratio'd 112 on REA and 113 on IMF. Very moderate framed, but one of the heaviest bulls in the pen. He will bring pounds to the table without adding frame.

Level topped, long, deep and piggy butt. How is that for a description! Do I really need to explain the term 'piggy butt'? Think of the muscle definition in a show pig, broad, deep and way down toward the hock. That is what this guy has. Great numbers for a heifer bull. The Chateau cattle are able to have more growth and stay heifer bulls due to a shorter gestation length. An ideal way to get calving ease, we think.

Look at the great bw to ww spread on actual performance. This kind of growth with an ME that is 0 is perfection. And to still have good carcass and scrotal... what more could you ask for? He has only 3 stars for calving ease since we had to assist his first calf heifer mother at birth, but it was late (and butt cold) and we did not want to wait, so we may have jumped the gun! The Mimi bull is gone now, and semen is hard to come by. We really love the influence he is having.

WE thought so much of this bull we used him on some registered heifers. Top 7% of the breed on CED and REA. He ratio'd 89 on bw, 104 on ww and still made 98 on yw, pretty good for a heifer bull. He also has excellent carcass ratios and epd's. His grandmother is a herdbuilder and her Ribeye is going to outdo her! Great female family is you are looking for replacements also. He is a smaller framed bull that is absolutely flawless, he will take frame off of progeny without giving up performance.

Not a 4 star calving ease bull since we had to assist his first calf mother, but wow did she do a job with this guy! Top 10% in breed on me, yw, milk and total maternal, a hard combination to achieve. The Prime Cut bull gave us great females, and the Mimi bull is a breed leader in type and quality replacements. Add great carcass to the mix and you have a no holes sire.				CED	7

This bull was born twin to a heifer. His mom carries some bw, so his epd's don't match his actual 60lb bw. He is a small framed bull that is a wide load! He gets that from Mike. He had the largest REA at scanning of all the bulls. You can see it when you look over his top, or 'table', as Kevin would put it. Of course, being a twin, he does not get credit for any of this in his epd's, as he is his own contemporary and only ratio's at 100. His actual yw was 1090 on 3/26/08, but he got hurt by being a month over and coming off of the 'winter from hell'. With supervision, he could still be a heifer bull also.				CED	+5

A smaller framed thick dude! He has performance while lowering frame and feed requirements. He also has an extremely thick lower quarter, (piggy butt!). For a heifer bull, you could not ask for a better combination. His mother is also the dam of KCC Mike, an AI bull that went to Rawlins Ranch, Florida. You can see the type!

Another heifer bull with a great birth to weaning spread. The prime cut daughters are really earning their keep. And they do it with low ME (maintenance energy) values. Remember the lower the better with ME values. We used this bull on some registered heifers for 2 reasons. The first is the sire. The D1119 mother of Tomahawk was our favorite cow. She is gone now, but we do have one ET son out of her in this sale also. (LOT 23) The second is the Primecut female influence for future heifers. With good carcass, performance, low ME and the females behind this guy, he is heifer bull deluxe.

This bulls sire is out of the same cow as Mimi. Coupled with the Marias line, you can see the thickness when you look at him. Performance in pounds is what he has proven. We had heavier birth-weights overall that year, but we also had some nasty weather to deal with. So on cows, you will not have any problems. One of the heaviest bulls in the offering, you will see his depth and appreciate it!

 KCC Krob 902

This bull is in the top 1% of the breed for WW, YW and total maternal EPD's. And his dam has a 103.7 MPPA! Any other year, his BW would have been at least 10 lbs. lower, but that is the way it goes. Cows will not have any problem with him, as his EPD would indicate. He will give you explosive growth. He is deep ribbed with great length and balance.

A good bull for those selling at weaning, as he has excellent weaning potential. Of course his yearling is in the top 8% of the breed also. This bull is another one of those that would rather 'fight that eat'. We would really like to take testosterone blood samples at yearling when we ultrasound. This bull was slick haired and randy even then. We really feel that these high testosterone bulls get hurt on ultrasound, as they are leaner. They show the thinner skinned, shed early type.

This bull is another with that great lower quarter and butt muscle definition that we refer to as 'piggy butt.' He is in the top 5% in the breed for WW, YW and Total Maternal EPD's. He should be a pound producer. He is moderate framed with good milk and stayability.
